California Residential Code Fire Sprinkler Requirements:

Please note that since the adoption of the 2010 California Residential Code (CRC) on January 2011, all newly constructed one- and two- family dwellings and townhouses are required to be equipped with an automatic fire sprinkler system in accordance with Section R313. Fire sprinklers are not required for additions and alterations to existing buildings that are not already provided with automatic fire sprinklers.

The fire sprinkler system shall be designed by a California licensed civil engineer, mechanical engineer, or a C-16 California State licensed contractor. The design shall be based on the available water supply pressure and flow. Please contact the City of Folsom Fire Department, at (916) 984-2298 for water capacity flow test of fire hydrants located at the address of the project site.

Please find the link to the request form and the fee due at the time of the request in the Building Safety Division Download folder under – Residential Forms and Information folder.
