Tree Protection Zone

The area around a tree known as the **Tree Protection Zone (TPZ)** is protected by Folsom Municipal Code.

The longest horizontal branch, measured from the center point of the tree to the furthest point of the dripline, plus one foot, shall be used as the radius of a circle.

The 4-foot-high brightly colored tree protective construction fencing with 5' stakes (10' on center maximum spacing for posts, 50' maximum spacing for signs) shall be installed outside of this zone and be well maintained in an erect condition all through the construction period. It is mandatory that the City Arborist shall inspect the exclusionary fencing prior to the commencement of any grubbing, tree pruning or removal, grading, trenching, excavation, or construction. The tree protection fencing shall **not** be moved or removed unless written approval is given by the City Arborist, call: (916) 355-7281.
